Definition:

A thin, curved lens that is applied directly to the surface of the eye is called a contact lens. It is usually recommended by an optometrist or ophthalmologist to treat certain corneal diseases or to correct eyesight. It is usually constructed of a polymeric substance. The most frequent refractive defects that contact lenses are used to treat are astigmatism, hyperopia, and myopia, or nearsightedness and farsightedness. They can also be used to treat certain eye disorders like keratoconus, which causes the cornea to grow more curved, and to correct presbyopia, a condition that affects people over 40 and causes them to become increasingly farsighted. The prescription of contact lenses is usually determined by the patient's lifestyle and visual requirements.
