Sarcopenia Treatment Market: Global Opportunity Analysis and Industry Forecast, 2021-2030”
Allied Market Research

The disease known as sarcopenia is characterized by the loss of skeletal muscle mass and strength. While it is largely an illness of the aged, diseases other than those that only affect the elderly may be linked to its development. Sarcopenia is a disorder that affects physical activity levels. Common symptoms include poor muscle mass or progressive loss, overall weakness, and decreased endurance. Reduced levels of physical exercise also have a

role in the atrophy of muscles.

The increasing prevalence of the aged population and the expanding use of vitamins and

nutritional supplements are two major factors that are anticipated to propel the expansion of the market for sarcopenia treatments over the forecast period. The market for sarcopenia treatments is also expected to grow as a result of the predicted rise in sarcopenia cases. Also, increase in R&D activities for the treatment of sarcopenia is further projected to support the growth of the sarcopenia treatment market. Furthermore, an increase in malnutrition cases brought on by inadequate dietary intake may present more growth prospects for the sarcopenia therapy industry in the years to come.

The market is divided into categories based on treatments, such as protein supplements, vitamin B12 supplements, and supplements for calcium and vitamin D. As of 2020, the segment that sells protein supplements was the largest worldwide market, and it is expected that this trend would hold during the projected period. The global prevalence of nutritional deficiency has increased, and research and development efforts for new treatments, medications, and supplements are predicted to fuel the market for sarcopenia treatments.

By treatment, the protein supplement segment witnessed the highest growth with a CAGR of 5.9% in the global sarcopenia treatment market in 2020.

By route of administration, the oral segment held the largest market share in 2020 and is expected to remain dominant throughout the forecast period.

By distribution channel, the hospital pharmacies segment exhibits the fastest growth and is expected to grow at a CAGR of 5.5% from 2021 to 2030.

By region, Asia-Pacific is expected to experience a growth at the highest rate, registering a CAGR of 7.5% during the forecast period.
