Airport supply chain management refers to ensuring that airports have the critical equipment they need in stock, keeping idle items to a minimum, decreasing maintenance costs, and maintaining a high level of inventory accuracy.

The two major types of airport supply chain management are internal and external. Internal supply chain management refers to the series of internal business operations that end with the delivery of a product to the consumer. It has two major components: software and services. It is used in several applications, such as security, content management, logistics, integration, collaboration, gate management, performance management, business applications, and other applications.
