Pipeline integrity management (PIM) is a comprehensive strategy for understanding and managing pipelines securely and reliably. The process that ensures the distribution and transfer of natural gas, hazardous liquids, and other types of gas through pipelines must implement complete integrity management procedures following pipeline safety rules.

The main types of pipeline integrity management are inspection services, cleaning services and repair and refurbishment services. Inspection services in pipeline integrity management are used to perform a structural evaluation of pipeline systems periodically to detect pipeline defects such as corrosion and cracks. The various sectors including crude oil and natural gas are deployed through onshore and offshore locations.
