Instant noodles are a type of noodle that is sold in a pre-cooked and dried block, often with added flavoring powder and seasoning oil. These noodles are typically made using wheat flour that has been finely ground and combined with a mixture of alkaline salts to give them their distinctive texture and flavor. Instant noodles are used to reduce the cooking time of traditional noodles.

The two main types of instant noodles are fried and non-fried. Fried noodles refer to deep-fried strips of wonton wrappers and crispy, fried wonton noodles. They are available in different packagings such as packets and cups, and they are available in various distribution channels such as supermarkets and hypermarkets, specialty stores, convenience stores, online stores, and others.
