An FRP tank is a composite product made of fiberglass-reinforced plastic, comprised of a polymer matrix and fiber reinforcement. These are used for storing any gas or fluid that is not corrosive to FRP.

The main resin types in FRP tanks are polyester, epoxy and other. Polyester is a high-performance FRP tank that allows the user to freely create the required capacity based on the volume of water needed and the available space. The fibers types are carbon fiber and fiberglass, that are used in manufacturing of these tanks for various applications such as water/wastewater, septic, pulp and paper, chemical, petroleum and agriculture, aquaculture and others.
