A busbar is a metallic strip or bar used in a power distribution system to conduct and transmit electrical electricity. It is usually constructed of copper or aluminum and is built to carry a lot of electricity.

The main types of materials used in busbars are aluminum, copper, and brass. Aluminum refers to a thin, silvery-white metal that is ductile, lightweight, and corrosion-resistant. Aluminum is commonly used to manufacture busbars due to its favorable electrical and mechanical properties, such as lower resistivity, being lightweight, and others. The various power ratings include low, medium, and high, which are used in utilities, industrial, residential, and commercial uses.
