Small-scale LNG (SS LNG) is a collection of logistics activities used to handle small and medium amounts of liquefied natural gas (LNG). SSLNG logistics is primarily used to supply LNG and Bio-LNG to heavy road, maritime, and rail transportation sectors.

The main types of small-scale LNG are liquefaction and regasification. The liquefaction terminal is a terminal in charge of receiving, storing, conditioning, and delivering LNG to consumers. Liquefaction terminals liquefy natural gas and convert it into a liquid that can be transported via pipelines. A liquefaction terminal is an essential part of the liquefied natural gas (LNG) supply chain. The small-scale LNG is supplied through modes such as truck, rail, transshipment, and bunkering, and captive consumption through the pipeline and used in applications such as industrial, transportation, utilities, and marine.
