Transformer oil is a type of oil that is stable at high temperatures and has outstanding electrical insulating properties. It is produced by distilling refined crude oil at temperatures between +300 °C and +400 °C (752 °F). The quality of crude base stock oil varies depending on where it is sourced, which impacts the characteristics of the oil.

The major types of transformer oil are naphthenic oil, paraffinic oil, silicone-based oil, bio-based oil, and other types of oil. Naphthenic oil is a group V base oil generated by hydro-treating sweet crude distillates at pressures greater than 2500 psi. It has a low pour point, high solubility, little wax, and little aromatic content. It can function in a multiple ways, such as, insulator, cooling agent, lubricant, and chemical stabilizer. It is used in several applications, such as, residential, commercial, and industrial, used by transmission and distribution, railways and metros, power generation, and other end users.
