Aircraft maintenance refers to tasks required for the upkeep, overhaul, repair, or modification of an aircraft or an aircraft component carried out at a facility with the necessary personnel and equipment, as well as the ability to quickly obtain the necessary parts for the facility's operator. The major types of aircraft maintenance services are engine overhaul, line maintenance, modifications, components and APU (auxiliary power unit), which are used in narrow-body and wide-body aircraft. An engine overhaul refers to disassembling the existing engine and installing new internal components. Major organizations involved are independent MRO (maintenance, repair and overhaul), original equipment manufacturer MRO and others. Major end-users involved are commercial aircraft and military aircraft.
