

A revolutionary new method for finding extraterrestrial life

A virtual video camera is set to show an exciting new way to explore the universe, discover extraterrestrial life, and change cosmology forever.

LONDON, ENGLAND, UK, June 16, 2024

/EINPresswire.com/ -- Based on new discoveries regarding the fundamental nature of light, it will become possible to see exoplanets as if there is a video camera stationed on the surface of an exoplanet.

It is claimed that starlight mostly drowns out reflected light from exoplanets making it very difficult to see such planets. But a new technique is revealed for the first time that gets round this problem.

Light is a well-studied subject, yet there are many misconceptions concerning light's fundamental nature. Some mysteries about light continue to puzzle scientists even today in the 21st Century. But now, in a new book ['Final Theory of Light: & Finding Extraterrestrials'](#) these puzzles are resolved and revealed for the first time.

For example, what exactly makes the speed of light always constant; why light can never bend, bounce or reflect off anything (this is very misunderstood); why all light-photons in the universe are identical; the spurious nature of the quantum theory of light; how to see exoplanets in full detail; how the famous double-slit experiments of light misled the world; exactly how objects convey their colours to our eyes, and much more.

Quantum physics is overdue for a monumental change of direction. This book sets the standard for such a change and is expected to have a lasting impact on the scientific community and beyond.

The 'Final Theory of Light: & Finding Extraterrestrials' gives you a fundamental understanding of light as never before. It is written for a general audience to enjoy, regardless of background or
