Definition:

Procedure of collecting samples from the human body, most frequently for diagnostic purposes, is referred to as a swab, which is an essential piece of medical equipment. Swabs play an important role in the process of identifying diseases, illnesses, and genetic material, and they are mostly used by medical professionals, researchers, and laboratories. The need for swabs is being fueled by the increasing emphasis placed on disease identification and research. However, there are disruptions in the supply chain as well as manufacturing challenges that prevent its seamless availability. Opportunities can be found in technical improvements, which can lead to collection methods that are both more efficient and accurate. Standardisation and making sure users are comfortable are two of the challenges. The utilisation of swab-based diagnostics in telemedicine and in-home healthcare is becoming an increasingly popular movement.
