

## Revolutionizing Listeria Monocytogenes Treatment: Current Trends and Future Prospects 2024-2033

The Business Research Company has updated all its market reports with the latest information for the year 2024, projecting trends and forecasts until 2033

LONDON, GREATER LONDON, UK, June 17, 2024 /EINPresswire.com/ -- The Listeria monocytogenes infections treatment market size has shown robust growth in recent years, rising from \$4.52 billion in 2023 to an

estimated \$4.79 billion in 2024, at a compound annual growth rate (CAGR) of 5.9%. This growth can be attributed to increased food safety regulations, a rise in the incidence of foodborne illnesses, advancements in diagnostics, and heightened awareness through education and healthcare infrastructure development.

## "

The Business Research Company has updated all its market reports with the latest information for the year 2024, projecting trends and forecasts until 2033" *The Business Research Company*  Rising Incidence of Foodborne Diseases Drives Market Growth

The increasing prevalence of foodborne diseases, including those caused by Listeria monocytogenes, continues to propel the expansion of the infections treatment market. Listeria monocytogenes, a bacterium found in contaminated food and beverages, poses significant health risks. Effective treatment mitigates these risks, reducing severity and potential complications associated with listeriosis. According to the European Food Safety

Authority, there was a notable 29.8% increase in foodborne incidents in 2021 compared to the previous year, underscoring the urgency of effective treatment solutions.
