Company*

The increase in Epstein-Barr virus (EBV) infections is expected to propel the growth of the nasopharyngeal carcinoma treatment market. EBV, a common and highly contagious infection caused by the human herpesvirus 4, is strongly associated with developing NPC. According to the National Library of Medicine (NLM), approximately 95% of the global adult population experienced an EBV infection. This increase in infections is a significant driver for the

growth of the NPC treatment market.
