Definition:

Video servers use a particular technology to catalog and store video clips or full-length videos and to distribute them as needed. The technologies used for video servers include codecs and transcoding tools, as well as broadcast-quality features to ensure high-quality streaming digital video. Video servers also use metadata to fully document the characters of video clips for efficient distribution. As a digital video storage resource, the video server has transformed broadcast industries. The standard used to be huge analog video reels in metallic jackets stored on large shelving units, broadcast entities can now store hours of video in a standard-sized video server.

Market Trends:

- Rising Demand for Video on Demand (VOD) Services
- Growing the reach of Video Content Is Positively Influencing the Market

Market Drivers:

- Growing Digitization in Media and Entertainment Industry Coupled With Favorable Government Initiatives
- Rising Demand for High Definition (HD) Content Production

Market Opportunities:

- The emergence of Over-The-Top (OTT) Services
