Emergen Research

brand visibility. Improved patient care, more Internet presence, and 24-hour availability all work together to assist any healthcare organization in finding new sources of development and revenue. Many large healthcare systems have online patient portals where patients can send messages to doctors, arrange appointments, examine test results, renew prescriptions, pay bills, and more. Online portals have made it easier for people to get critical health data and for clinicians to communicate with their patients.

The latest research report is dubbed as the first document encompassing the latest information about the Care

Communications market that has been gravely affected by the COVID-19 pandemic. The global health crisis poses significant threats to the future growth of the Care Communications industry. The report assesses the profound changes in this business setting caused by the outbreak and

considers the prominent market aspects that have been severely disrupted by the pandemic. The report thus expounds on the rapidly changing market scenario in this COVID-19 era, which aims to help businesses involved in this sector overcome the pandemic's gripping effects and formulate new growth strategies to boost the COVID-19 preparedness.

Key Market Competitors Profiled in the Report:

Johnson Controls International Plc, Hill-Rom Holdings, Inc., Cisco Systems Inc., Cerner Corporation, Symplr, Koninklijke Philips N.V., NEC Corporation, Plantronics, Inc., Vocera Communications, Avaya LLC, and Spok Holdings, Inc

Some Key Highlights From the Report

The software segment accounted for a significantly large revenue share in the global care communications market in 2022. Revenue growth of the software segment is driven by increasing adoption of digital technologies in the healthcare industry. Healthcare organizations are rapidly embracing clinical communication and collaboration software to improve clinical processes, enhance patient care, and reduce expenses. This software empowers healthcare professionals to securely share critical patient information, collaborate in real time, and access clinical data from any location. In addition, it simplifies administrative tasks and optimizes clinical operations, allowing healthcare providers to focus more on delivering patient care.

The on-premises segment accounted for largest revenue share in 2022. The increasing use of data storage and access systems within hospitals and clinics is leading to expansion of the on-premises segment. Healthcare institutions have strengthened their IT infrastructure to meet their expanding data needs. Historically, these organizations were hesitant to embrace cloud-based deployment and have preferred on-premises solutions because IT administrators have more control over the physical data centers. The growing investment by hospitals and clinics in enhancing their IT infrastructure has contributed to revenue growth of this segment.

The care communications market in North America is expected to account for largest revenue share over the forecast period. Rising demand for telehealth services in this region is driving market revenue growth. Moreover, incorporation of a smart, efficient healthcare system also contributes to the region's rapid market revenue growth.

In September 2022, Ascom, a leading global provider of enterprise-grade wireless communication and collaboration solutions, is introducing an upgraded Ascom Healthcare Platform (AHP) for hospitals and other healthcare facilities. The platform also enhances the customer experience by providing a unified user interface for its Digistat and Unite software suites. The new AHP provides seven cutting-edge solutions for the acute care segment, including

workplace and staff safety, care coordination, response team management, smart nurse call systems, clinical monitoring and alarm management, silent medical alarms, and a clinical decision support system.
