Swine flu vaccination refers to vaccines designed to protect against the influenza viruses that commonly infect pigs (swine flu). The purpose of vaccines is to prevent transmission of swine flu from pigs to humans.

The main vaccine types of the swine flu vaccination market are intranasal, toxoid, conjugate, inactivated vaccine, attenuated vaccine, and others. An intranasal vaccine is a type of vaccine that is administered through the nose. It stimulates the immune system to protect against specific diseases by introducing weakened or dead pathogens. The various treatment types include influenza, meningococcal, cervical cancer, pneumococcal, hepatitis, measles, mumps, and rubella and are used by various end users including hospitals, clinics, and others.
