## Growth driver of the aortic endograft market

The growing prevalence of aortic aneurysms is expected to propel the growth of the aortic endograft market going forward. An aortic aneurysm is a localized and abnormal dilation or bulging of the aorta, which is the largest artery in the human body. Aortic endografts are used to treat aortic aneurysms because they are less invasive than traditional open surgery. A fabric-

covered metal or polymer device is inserted through a catheter, strengthening weak aortic walls and lowering the risk of rupture.
