

Familial Primary Pulmonary Hypertension Treatment Market 2032: FDA Approval, Therapies, Companies by DelveInsight

Familial Primary Pulmonary Hypertension companies are Liquidia Technologies, Acceleron Pharma, United Therapeutics, Actelion, Novartis, Insmed, Merck, Janssen.

ALBANY, NEW YORK, UNITED STATES, July 2, 2024 /EINPresswire.com/ -- DelveInsight's "Familial Primary Pulmonary Hypertension Market Insights, Epidemiology, and Market Forecast-2032" report delivers an in-depth understanding of Familial Primary Pulmonary Hypertension, historical and forecasted epidemiology as well as the Familial Primary Pulmonary Hypertension market trends in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom), and Japan.

The Familial Primary Pulmonary Hypertension market report provides current treatment practices, emerging drugs, the market share of the individual therapies, and the current and forecasted Familial Primary Pulmonary Hypertension market size from 2019 to 2032, segmented by seven major markets. The Report also covers current Familial Primary Pulmonary Hypertension treatment practice/algorithm, market drivers, market barriers, and unmet medical needs to curate the best opportunities and assesses the underlying potential of the Familial Primary Pulmonary Hypertension market.

Some facts of the Familial Primary Pulmonary Hypertension Market Report are:

- According to DelveInsight, Familial Primary Pulmonary Hypertension market size is expected to grow at a decent CAGR by 2032.
- Leading Familial Primary Pulmonary Hypertension companies working in the market are Liquidia Technologies, Acceleron Pharma, Altavant Sciences, United Therapeutics, Actelion, CVie Therapeutics Co. Ltd., Respira Therapeutics, Lung Biotechnology PBC, Novartis, Cereno Scientific

AB, Inmed Incorporated, Aerovate Therapeutics, Merck, Janssen Pharmaceutical K.K., and Others.

- Key Familial Primary Pulmonary Hypertension Therapies expected to launch in the market are LIQ861, RT234 - vardenafil inhalation powder, Subcutaneous Treprostinil, Bosentan, LTP001, UT-15, CS1 Administration, Treprostinil Palmitil, AV-101, Sotatercept, Macitentan, and others.
- Generally, PAH affects women aged between 30 and 60 years. However, it can occur in males and is often associated with worse clinical outcomes.
- In a study by Ling et al., 2012 a total of 482 patients (93% idiopathic, 5% heritable, and 2% anorexigen-associated pulmonary arterial hypertension) were diagnosed, giving rise to an estimated incidence of 1.1 cases per million per year in 2009.

Familial Primary Pulmonary Hypertension Overview

Familial primary pulmonary hypertension (FPPH), also known as heritable pulmonary arterial hypertension (HPAH), is a rare genetic disorder characterized by high blood pressure in the pulmonary arteries, which are the vessels that carry blood from the heart to the lungs. This condition is inherited in an autosomal dominant pattern, meaning that a mutation in just one of the two copies of a gene can cause the disease. The most commonly affected gene is BMPR2, though other genes like ALK1, ENG, and SMAD9 can also be involved.

Familial primary pulmonary hypertension leads to the progressive narrowing and thickening of pulmonary arteries, resulting in increased resistance to blood flow. Consequently, the right side of the heart has to work harder to pump blood through the lungs, which can eventually lead to heart failure.

Symptoms of Familial primary pulmonary hypertension often include shortness of breath, fatigue, chest pain, dizziness, and swelling in the ankles or legs. These symptoms typically worsen over time and can severely impact the quality of life.

Familial primary pulmonary hypertension Diagnosis involves a combination of family history, physical examination, echocardiogram, right heart catheterization, and genetic testing. Treatment options for Familial primary pulmonary hypertension are aimed at managing symptoms and slowing disease progression. They include medications such as endothelin receptor antagonists, phosphodiesterase-5 inhibitors, and prostacyclin analogs, as well as lifestyle modifications and, in severe cases, lung transplantation. Despite advances in treatment, Familial primary pulmonary hypertension remains a serious condition with a variable prognosis, underscoring the importance of early detection and ongoing research for better therapies.

Familial Primary Pulmonary Hypertension Market

The Familial Primary Pulmonary Hypertension market outlook of the report helps to build a detailed comprehension of the historical, current, and forecasted Familial Primary Pulmonary Hypertension market trends by analyzing the impact of current Familial Primary Pulmonary

Hypertension therapies on the market and unmet needs, and drivers, barriers, and demand for better technology.

This segment gives a thorough detail of the Familial Primary Pulmonary Hypertension market trend of each marketed drug and late-stage pipeline therapy by evaluating their impact based on the annual cost of therapy, inclusion and exclusion criteria, mechanism of action, compliance rate, growing need of the market, increasing patient pool, covered patient segment, expected launch year, competition with other therapies, brand value, their impact on the market and view of the key opinion leaders. The calculated Familial Primary Pulmonary Hypertension market data are presented with relevant tables and graphs to give a clear view of the market at first sight. According to DelveInsight, the Familial Primary Pulmonary Hypertension market in 7MM is expected to witness a major change in the study period 2019-2032.

Familial Primary Pulmonary Hypertension Epidemiology

The Familial Primary Pulmonary Hypertension epidemiology section provides insights into the historical and current Familial Primary Pulmonary Hypertension patient pool and forecasted trends for seven individual major countries. It helps to recognize the causes of current and forecasted trends by exploring numerous studies and views of key opinion leaders. This part of the Familial Primary Pulmonary Hypertension market report also provides the diagnosed patient pool, trends, and assumptions.

Familial Primary Pulmonary Hypertension Drugs Uptake

This section focuses on the uptake rate of the potential Familial Primary Pulmonary Hypertension drugs recently launched in the Familial Primary Pulmonary Hypertension market or expected to be launched in 2019-2032. The analysis covers the Familial Primary Pulmonary Hypertension market uptake by drugs, patient uptake by therapies, and sales of each drug. Familial Primary Pulmonary Hypertension Drugs Uptake helps in understanding the drugs with the most rapid uptake and the reasons behind the maximal use of new drugs and allows the comparison of the drugs based on Familial Primary Pulmonary Hypertension market share and size, which again will be useful in investigating factors important in market uptake and in making financial and regulatory decisions.

Familial Primary Pulmonary Hypertension Pipeline Development Activities

The Familial Primary Pulmonary Hypertension report provides insights into different therapeutic candidates in Phase II, and Phase III stages. It also analyses Familial Primary Pulmonary Hypertension key players involved in developing targeted therapeutics.

Familial Primary Pulmonary Hypertension Therapeutics Assessment

Prominent companies are actively engaged in the development of innovative therapies in the Familial Primary Pulmonary Hypertension Therapeutics market. These endeavors are expected to propel the growth of the Familial Primary Pulmonary Hypertension treatment sector in the coming years. Key companies involved in these efforts include Liquidia Technologies, Acceleron Pharma, Altavant Sciences, United Therapeutics, Actelion, CVie Therapeutics Co. Ltd., Respira Therapeutics, Lung Biotechnology PBC, Novartis, Cereno Scientific AB, Insmmed Incorporated, Aerovate Therapeutics, Merck, Janssen Pharmaceutical K.K., and others.

Familial Primary Pulmonary Hypertension Report Key Insights

1. Familial Primary Pulmonary Hypertension Patient Population
2. Familial Primary Pulmonary Hypertension Market Size and Trends
3. Key Cross Competition in the Familial Primary Pulmonary Hypertension Market
4. Familial Primary Pulmonary Hypertension Market Dynamics (Key Drivers and Barriers)
5. Familial Primary Pulmonary Hypertension Market Opportunities
6. Familial Primary Pulmonary Hypertension Therapeutic Approaches
7. Familial Primary Pulmonary Hypertension Pipeline Analysis
8. Familial Primary Pulmonary Hypertension Current Treatment Practices/Algorithm
9. Impact of Emerging Therapies on the Familial Primary Pulmonary Hypertension Market

Table of Contents

1. Key Insights
2. Executive Summary
3. Familial Primary Pulmonary Hypertension Competitive Intelligence Analysis
4. Familial Primary Pulmonary Hypertension Market Overview at a Glance
5. Familial Primary Pulmonary Hypertension Disease Background and Overview
6. Familial Primary Pulmonary Hypertension Patient Journey
7. Familial Primary Pulmonary Hypertension Epidemiology and Patient Population
8. Familial Primary Pulmonary Hypertension Treatment Algorithm, Current Treatment, and Medical Practices
9. Familial Primary Pulmonary Hypertension Unmet Needs
10. Key Endpoints of Familial Primary Pulmonary Hypertension Treatment
11. Familial Primary Pulmonary Hypertension Marketed Products
12. Familial Primary Pulmonary Hypertension Emerging Therapies
13. Familial Primary Pulmonary Hypertension Seven Major Market Analysis
14. Attribute Analysis
15. Familial Primary Pulmonary Hypertension Market Outlook (7 major markets)
16. Familial Primary Pulmonary Hypertension Access and Reimbursement Overview
17. KOL Views on the Familial Primary Pulmonary Hypertension Market

18. Familial Primary Pulmonary Hypertension Market Drivers
19. Familial Primary Pulmonary Hypertension Market Barriers
20. Appendix
21. DelveInsight Capabilities
