

Global Animal Vaccines Market Outlook

Growth in demand for pet insurance, rise in prevalence of animal diseases, surge in expenditure for animal health, and increase in ownership of companion animal drive the growth of the global animal vaccines market. However, highly competitive meat and milk prices and adverse impact of veterinary vaccines on human and animal health hinders the market growth. On the other hand, advancement in vaccine product and rise in demand for hybrid animal create new opportunities in coming years.

COVID-19 Impact

The emergence of covid-19 affected the animal vaccine market negatively. The veterinary organizations across the globe have recommended limiting animal patient care to acutely ill animals and emergencies.

The lockdown measures have led to rescheduling of annual checkup exams and elective vaccination procedures. The supply of animal vaccination witnessed disruptions to certain point. However, the manufacturers ensured proper supply of animal vaccinations.

The attenuated vaccines segment to maintain its dominant position during the forecast period

Based on product, the attenuated vaccines a segment held the highest market share in 2020, accounting for nearly two-fifths of the global animal vaccines market, and is expected to maintain its dominant position during the forecast period. This is attributed to availability of advanced technology for specific mutations/deletions in genes of the virus. However, the DNA vaccines segment is estimated to witness the highest CAGR of 8.10% from 2020 to 2030, owing to increase in prevalence of animal diseases, and its easy manipulation as compared to traditional vaccines.

The animal vaccines market is segmented into companion animal, livestock animal, and aquaculture. The companion animal segment is further segmented into cats and dogs. The livestock animal segment is further classified into cattle, pigs, poultry, sheep, and others (goats, horses, asses, camel, and others). The companion animal segment is expected to be the fastest growing segment throughout the analysis period and accounted for almost one-third of the total share of the market in 2020.

Based on region, North America held the majority share in 2020, with nearly two-fifths of the total share of the global animal vaccines market, and will maintain its highest contribution throughout the forecast period. This is due to established veterinary organizational structures and concern amongst people to ensure animal health. However, Asia-Pacific is expected to maintain the highest CAGR of 5.90% during the forecast period, owing to increase in need of protection of livestock from mass wipeouts due to epidemics, especially in countries such as India.

Animal vaccines are eco-friendly products that help reduce the use of antibiotics and risk of drug-resistant microorganisms. They help protect animal health by immunizing the animal from any particular disease. These vaccines are essential for animal well-being, production of food, and safety of public health. Animal vaccines is a component of a larger field of medicine called veterinary biologics (VB).
