

CSGORoll Launches WebAPI Token Extension For CS2 Trades

UNITED KINGDOM, July 5, 2024 /EINPresswire.com/ -- [CSGORoll](https://www.csgoroll.com/), a CS2 skins platform, has launched a Chrome extension designed to automatically collect and update Steam webAPI tokens.

The tool has been developed by CSGORoll to ensure safe and uninterrupted trading sessions by detecting any changes or expirations to Steam's API. It operates in the background, transmitting users' tokens to CSGORoll's servers via a secure communication protocol. Tokens are only accessible by the user they belong to, and used exclusively for trading purposes.

With an average rating of 4.8 out of 5, the extension has been downloaded by 4,000 users in the first week since its release.

Debashish Bhattacharjee, Chief Marketing Officer for CSGORoll, commented on the release of the webAPI token -

"We developed this Chrome extension to make trading easier for our community by removing the hassle of managing tokens manually. We're thrilled to see the positive feedback by our users who are able to complete trades with minimised delays!"

Founded in 2016, CSGORoll acutely understands the various challenges associated with the manual WebAPI token collection process. Their solution provides users with a simplified method to complete the trading process, by removing associated interruptions and delays.

The token is currently available to use on any Chromium-based engine browser, including Chrome, Microsoft Edge, Opera, Brave and Yandex. You can download it here -
