The rising disposable incomes across the world are significantly contributing to the growth of the pigmentation disorders treatment market. The growing disposable income of individuals, especially in developing regions, allows for increased spending on cosmetic and dermatological treatments. For instance, according to the October 2023 data published by the Bureau of Economic Analysis (BEA), the disposable income of Americans

increased from \$18,247.8 billion in the first quarter of 2022 to \$19,880.2 billion in the first quarter of 2023. Therefore, the rising disposable incomes across the world will drive the pigmentation disorders treatment market.
