

Eosinophilic Esophagitis Market Forecast 2034: FDA Approvals, Clinical Trials, Therapies, and Companies by DelveInsight

According to DelveInsight, the Eosinophilic Esophagitis Market size was valued ~ USD 940 thousand million in 2023.

ALBANY, NEW YORK, UNITED STATES, July 10, 2024 /EINPresswire.com/ -- DelveInsight's "Eosinophilic Esophagitis Market Insights, Epidemiology, and Market Forecast-2034" report offers an in-depth understanding of the Eosinophilic Esophagitis, historical and forecasted epidemiology as well as the Eosinophilic Esophagitis market trends in the United States, EU4 (Germany, Spain, Italy, France, and United Kingdom) and Japan.

To Know in detail about the Eosinophilic Esophagitis market outlook, drug uptake, treatment scenario and epidemiology trends, Click here; [Eosinophilic Esophagitis Market Forecast](#)

Some of the key facts of the Eosinophilic Esophagitis Market Report:

- The Eosinophilic Esophagitis market size was valued approximately USD 940 thousand million in 2023 and is anticipated to grow with a significant CAGR during the study period (2020-2034)
- In January 2024, The US FDA granted approval for DUPIXENT (dupilumab) to treat pediatric patients between the ages of 1 and 11 years, weighing at least 15 kg, who have eosinophilic esophagitis (EoE). This approval stems from the Phase III EoE KIDS trial, which demonstrated that a higher percentage of children receiving DUPIXENT achieved histological remission compared to those receiving a placebo.
- There are few approved medications available in the market to treat eosinophilic esophagitis (EoE), including DUPIXENT (dupilumab) and JORVEZA (budesonide).
- In 2023, the overall diagnosed prevalent cases of eosinophilic esophagitis (EoE) were estimated to be around 800,000 across the Seven Major Markets (7MM). These numbers are projected to experience moderate growth at a compound annual growth rate (CAGR) by the year 2034.
- In 2023, within the Seven Major Markets (7MM), the United States reported the highest number

of diagnosed prevalent cases of eosinophilic esophagitis (EoE), totaling nearly 500,000 cases.

- Based on DelveInsight's analysis, the greatest number of diagnosed cases of eosinophilic esophagitis (EoE) were observed in Germany, with France following closely behind among the EU4 and the UK in 2023. It is anticipated that these numbers will rise throughout the forecast period from 2024 to 2034.
- According to the National Organisation of Rare Disorders (NORD), 1 in 2,000 people are thought to be affected by eosinophilic esophagitis
- With 319,429 Eosinophilic Esophagitis cases in 2020, the United States had the most cases among the 7 MM countries
- Key Eosinophilic Esophagitis Companies: Regeneron Pharmaceuticals, Sanofi, Bristol-Myers Squibb, Ellodi Pharmaceuticals, AstraZeneca, Allakos, EsoCap AG, Pfizer, Ception Therapeutics, Celgene, Dr. Falk Pharma GmbH, Revolo Biotherapeutics, Shire, Novartis, EMS, Celgene, Oxagen Ltd, Meritage Pharma, Inc, Forest Laboratories, and others
- Key Eosinophilic Esophagitis Therapies: Dupilumab, Cendakimab, APT-1011, Benralizumab, Lirentelimab, ESO-101, Etrasimod, reslizumab, CC-93538, Mesalamine, IRL201104, budesonide, QAX576, Florence, RPC4046, OC000459, Budesonide plus Prevacid, EUR-1100, and others
- The Eosinophilic Esophagitis epidemiology based on gender analyzed that Eosinophilic Esophagitis affects more males as compared to females
- The Eosinophilic Esophagitis market is expected to surge due to the disease's increasing prevalence and awareness during the forecast period. Furthermore, launching various multiple-stage Eosinophilic Esophagitis pipeline products will significantly revolutionize the Eosinophilic Esophagitis market dynamics.

Eosinophilic Esophagitis Overview

Eosinophilic esophagitis (EoE) is a chronic, immune-mediated inflammatory condition of the esophagus, characterized by the infiltration of eosinophils, a type of white blood cell, into the esophageal lining. This condition is often triggered by food allergens or environmental factors, leading to symptoms such as difficulty swallowing (dysphagia), food impaction, chest pain, and persistent heartburn that does not respond to standard antacid treatments.

Eosinophilic esophagitis is diagnosed through endoscopy and biopsy, where multiple samples of the esophageal tissue are examined for eosinophil infiltration. In adults, EoE can present as intermittent solid food dysphagia and impactions, whereas in children, it might manifest as feeding difficulties, vomiting, and failure to thrive.

Management of Eosinophilic esophagitis involves a combination of dietary modifications, medications, and lifestyle changes. Dietary strategies include elimination diets, where common allergens like dairy, wheat, soy, and nuts are removed, or elemental diets, which use amino acid-based formulas. Medications such as proton pump inhibitors (PPIs) and topical corticosteroids are used to reduce inflammation. In some cases, esophageal dilation may be necessary to alleviate strictures caused by chronic inflammation.

Ongoing research aims to better understand the pathophysiology of Eosinophilic esophagitis and develop more targeted therapies, improving the long-term outcomes and quality of life for individuals affected by this condition.

Eosinophilic Esophagitis Epidemiology

The epidemiology section provides insights into the historical, current, and forecasted epidemiology trends in the seven major countries (7MM) from 2020 to 2034. It helps to recognize the causes of current and forecasted trends by exploring numerous studies and views of key opinion leaders. The epidemiology section also provides a detailed analysis of the diagnosed patient pool and future trends.

Eosinophilic Esophagitis Epidemiology Segmentation:

The Eosinophilic Esophagitis market report proffers epidemiological analysis for the study period 2020–2034 in the 7MM segmented into:

- Total Prevalence of Eosinophilic Esophagitis
- Prevalent Cases of Eosinophilic Esophagitis by severity
- Gender-specific Prevalence of Eosinophilic Esophagitis
- Diagnosed Cases of Episodic and Chronic Eosinophilic Esophagitis

Eosinophilic Esophagitis Drugs Uptake and Pipeline Development Activities

The drugs uptake section focuses on the rate of uptake of the potential drugs recently launched in the Eosinophilic Esophagitis market or expected to get launched during the study period. The analysis covers Eosinophilic Esophagitis market uptake by drugs, patient uptake by therapies, and sales of each drug.

Moreover, the therapeutics assessment section helps understand the drugs with the most rapid uptake and the reasons behind the maximal use of the drugs. Additionally, it compares the drugs based on market share.

The report also covers the Eosinophilic Esophagitis Pipeline Development Activities. It provides valuable insights about different therapeutic candidates in various stages and the key companies involved in developing targeted therapeutics. It also analyzes recent developments such as collaborations, acquisitions, mergers, licensing patent details, and other information for emerging therapies.

Eosinophilic Esophagitis Therapies and Key Companies

- Dupilumab: Regeneron Pharmaceuticals/Sanofi
- Cendakimab: Bristol-Myers Squibb
- APT-1011: Ellodi Pharmaceuticals
- Benralizumab: AstraZeneca
- Lirentelimab: Allakos
- ESO-101: EsoCap AG

- Etrasimod: Pfizer
- reslizumab: Ception Therapeutics
- CC-93538: Celgene
- Mesalamine: Dr. Falk Pharma GmbH
- IRL201104: Revolo Biotherapeutics
- budesonide: Shire
- QAX576: Novartis
- Florence: EMS
- RPC4046: Celgene
- OC000459: Oxagen Ltd
- Budesonide plus Prevacid: Meritage Pharma, Inc
- EUR-1100: Forest Laboratories

Scope of the Eosinophilic Esophagitis Market Report

- Study Period: 2020–2034
- Coverage: 7MM [The United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan]
- Key Eosinophilic Esophagitis Companies: Regeneron Pharmaceuticals, Sanofi, Bristol-Myers Squibb, Ellodi Pharmaceuticals, AstraZeneca, Allakos, EsoCap AG, Pfizer, Ception Therapeutics, Celgene, Dr. Falk Pharma GmbH, Revolo Biotherapeutics, Shire, Novartis, EMS, Celgene, Oxagen Ltd, Meritage Pharma, Inc, Forest Laboratories, and others
- Key Eosinophilic Esophagitis Therapies: Dupilumab, Cendakimab, APT-1011, Benralizumab, Lirentelimab, ESO-101, Etrasimod, reslizumab, CC-93538, Mesalamine, IRL201104, budesonide, QAX576, Florence, RPC4046, OC000459, Budesonide plus Prevacid, EUR-1100, and others
- Eosinophilic Esophagitis Therapeutic Assessment: Eosinophilic Esophagitis current marketed and Eosinophilic Esophagitis emerging therapies
- Eosinophilic Esophagitis Market Dynamics: Eosinophilic Esophagitis market drivers and Eosinophilic Esophagitis market barriers
- Competitive Intelligence Analysis: SWOT analysis, PESTLE analysis, Porter's five forces, BCG Matrix, Market entry strategies
- Eosinophilic Esophagitis Unmet Needs, KOL's views, Analyst's views, Eosinophilic Esophagitis Market Access and Reimbursement
