

Unryo uses AI to monitor Proxmox Virtual Environment

This integration ensures that Proxmox users can efficiently manage their environments with live visibility, topology-based RCA and robust analytics.

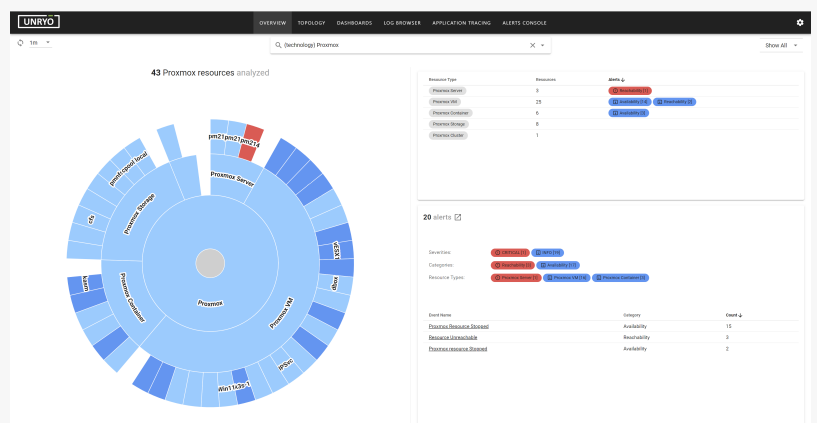

MONTREAL, QUEBEC, CANADA, July 11, 2024 /EINPresswire.com/ -- Unryo, a leading observability platform, proudly announces its latest integration with Proxmox, the powerful open-source server solution. This integration elevates the monitoring of [Proxmox Virtual Environments \(VE\)](#) by using data, AI and machine learning to detect issues and provide contextual insights, accelerating issue resolution and maximising service availability.

Key Monitoring Capabilities:

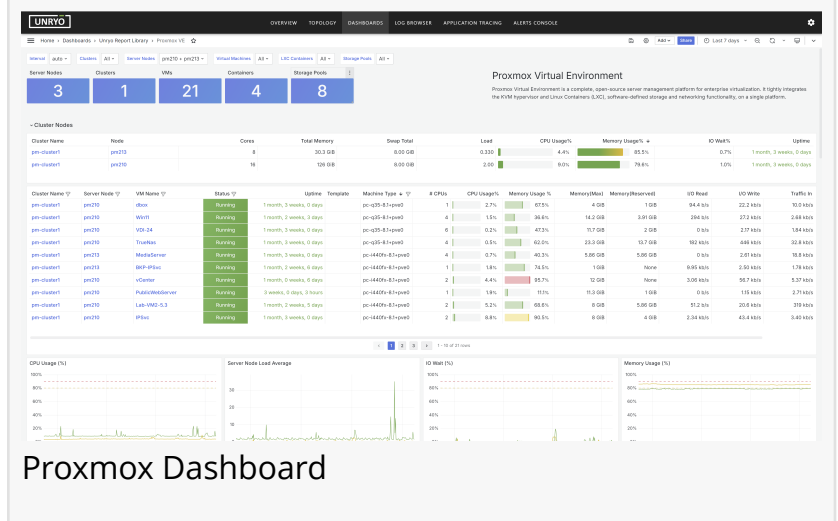

- Topology Mapping: Real-time discovery and mapping of dependencies between Proxmox clusters, nodes, VMs, containers and storage, for precise root-cause analysis.
- Anomaly Detection: Live analysis of Proxmox metrics, with use of an AI assistant to guide users with context.
- Topology-Based Correlation: Automatic RCA, Impact Analysis and SLO tracking to reduce troubleshooting time.

Proxmox Topology

Proxmox VE Single Pane of Glass

Proxmox Dashboard

- Real-Time Monitoring: Instant insights into Proxmox VM and container performance.
- Dynamic Dashboards: Customizable dashboards that offer comprehensive views of Proxmox cluster health.
- Intelligent Alarming: Configurable alerts to notify users of critical events and anomalies.

About Unryo

Unryo is a leading observability platform providing end-to-end visibility into complex applications and infrastructure. With a focus on innovation, Unryo delivers powerful analytics and proactive monitoring to help organizations achieve operational excellence. Unryo is a member of the [CNCF](#) (Cloud Native Computing Foundation).
