Growth Driver Of The Disease Management Apps Market

The growing adoption of smartphones is expected to propel the growth of the disease management apps market going forward. A smartphone refers to a cellular phone with a built-in computer and other functionality not previously present in phones, such as an operating system (OS), web browsing, and the ability to run software programs. Smartphones are instrumental in

the use of disease management apps, allowing users to access real-time health information, track and manage their conditions, receive reminders for medications, and communicate with healthcare providers, ultimately improving disease management.
