□□□□□□-□□ □□□□□□□□□□:

- The pandemic led to decrease in the number of diagnostic and therapeutic procedures with

nuclear medicines, as Covid-19 is a communicable disease.

- Several countries imposed country-wide lockdown to curb the spread of infection. During the lockdown, the number of patient visits to hospitals and clinics dropped significantly.

- On the other hand, radiopharmaceuticals could help in the detection of the coronavirus.

Moreover, it can provide evidence and clarify contradictory concepts in use of non-steroidal and anti-inflammatory drugs for Covid-19.

Rise in incidence of targeted population in Malaysia, surge in adoption of SPECT and PET scans, and increase in geriatric population in Malaysia drive the growth of the Malaysia nuclear medicines market. However, short half-life of radiopharmaceuticals coupled with supply volatility, logistical challenges, and stringent regulatory policies in Malaysia hinders the market. On the contrary, use of radiopharmaceuticals in neurological applications is expected to open lucrative opportunities for the market players in the future.

On the basis of modality, the brachy therapy segment is estimated to manifest the highest CAGR of 18.5% from 2020 to 2028. However, the SPECT segment held the lion's share in 2020, accounting for around three-fifths of the market.

Based on end users, the research institutes segment is anticipated to manifest the highest CAGR of 13.0% during the forecast period. However, the hospitals and diagnostic centers segment held the largest share in 2020, contributing to around 90% of the Malaysia nuclear medicines market.
