

# Biotrial COO Nicolas Fauchoux Honored as Top 50 COO

NEWARK, NJ, UNITED STATES, July 16, 2024 /EINPresswire.com/ -- [Nicolas Fauchoux](#), the Chief Operating Officer of [Biotrial](#), a leading Contract Research Organization (CRO), has been honored as one of the top 50 COOs globally at this year's OnCon Icon Awards. These awards celebrate leadership excellence and were announced virtually at the OnCon 2024 summit on April 23rd, highlighting Fauchoux's exceptional contributions to clinical research.

## A Journey of Growth and Innovation

Nicolas Fauchoux joined Biotrial as a medical doctor in October 2000. Initially screening volunteers and patients for study protocols, he developed a passion for clinical research. Advancing to Investigator, he held key positions, including Principal Investigator for complex CNS, cardiology, hematology, and infectious disease protocols.

In 2015, Fauchoux was appointed Global Chief Operating Officer and, in 2022, Chief Medical Officer, roles in which he thrived, leading the organization to new heights of international success. His leadership was instrumental in Biotrial's strategic expansion into the United States, establishing a state-of-the-art Clinical Pharmacology Unit (CPU) in Newark, New Jersey.

## Expanding Biotrial's Horizons in the U.S.

Founded in France in 1989, Biotrial has evolved into a global provider of comprehensive clinical research services. The company's expansion into the U.S. was not just a move but a strategic leap, recognizing the critical importance of being present in the world's largest market for clinical trials. The U.S. hosts most clinical trial sponsors, making it essential for Biotrial to establish a robust presence to serve its international clients effectively.

This endeavor required transferring Biotrial's 26 years of expertise from France to the U.S., ensuring the Newark facility met the same high standards as its European counterparts.

## Navigating Cross-Cultural Challenges

One unique aspect of Biotrial's expansion has been managing the cultural differences between the French headquarters and the U.S. team. Fauchoux played a pivotal role in bridging these gaps, fostering collaboration and understanding between French employees and U.S. nationals.

Biotrial's work culture demands flexibility and adaptability from all team members, from clinical technicians to doctors. This cross-cultural synergy has been vital in delivering exceptional service

to Biotrial's international clients.

The organization thrives on thinking outside the box, being committed, and working collaboratively. Our asset is being reactive, innovative, and flexible in meeting the diverse needs of our clients, from small startups to large international pharmaceutical companies.

#### Excellence in Neuroscience and Oncology

Biotrial excels in Neuroscience, offering translational solutions that precisely integrate non-clinical and clinical development.

In Oncology, Biotrial collaborates closely with specialized researchers, leveraging over 35 years of experience to pioneer new approaches from preclinical to clinical stages. A patient-centered approach and innovative solutions make Biotrial a partner of choice in early-stage oncology development.

#### Commitment to Support Innovation

With facilities in Rennes, France; Newark, New Jersey; London, England; and Quebec, Canada, Biotrial continues to lead clinical research and deliver exceptional results worldwide.

Reflecting on his journey, Fauchoux expressed immense pride in Biotrial's accomplishments and looks forward to future collaborations. "Our company's culture is built on the belief that no challenge is too big. With determination and collaboration, we find solutions and achieve our clients' goals," he said. "I invite you to consider working with us at our state-of-the-art facilities in Europe and the U.S. We are dedicated to innovation and excellence and look forward to supporting your drug development process to deliver effective cures to patients."
