

Gamgee Releases New Wi-Fi Fall Protection for Elderly Safety: Transforming Elderly Care with Smart Technology

Introducing a Leap in Elderly Care: New Wi-Fi Fall Protection Delivers Non-Intrusive, Smart Monitoring for Enhanced Safety and Independence

AMSTERDAM, THE NETHERLANDS, July 16, 2024 /EINPresswire.com/ -- [Gamgee](#), a leader in digital technology and home automation, launches the [Gamgee Wi-Fi Fall Protection for Elderly Safety](#). This system leverages the widespread presence of Wi-Fi to deliver a unique and comprehensive solution for elderly care.

Gamgee Wi-Fi Fall Protection

In a market primed for innovation, our system addresses the increasing need for effective fall detection and emergency response for the elderly population, allowing them to live independently and safely in their own homes.

Utilizing the Wi-Fi signals emitted by routers and mesh extenders, the Gamgee Wi-Fi Fall Protection for Elderly Safety captures disturbances caused by movement within the home. Unlike conventional fall detection systems, Gamgee's technology goes beyond basic motion detection by analyzing disruptions in Wi-Fi signals to accurately detect falls and differentiate them from normal activities.

This advanced feature allows the system to provide reliable monitoring without the need for uncomfortable wearable devices.

"Our Wi-Fi Fall Protection system doesn't just detect falls; it understands them," said Paul Hendriks, CEO and Co-Founder of Gamgee. "By converting every router into a potential safety device, we are significantly enhancing the safety and independence of elderly individuals everywhere."

Our system comes with a user-friendly mobile app that connects a network of caregivers and family members, enabling them to keep a close eye on their elderly loved ones from afar. If the

Our Wi-Fi Fall Protection system doesn't just detect falls; it understands them. We convert every router into a safety device and enhance the safety and independence of senior individuals everywhere."

Paul Hendriks, CEO and Co-Founder of Gamgee.

system detects a fall, it instantly alerts each caregiver according to the preferences set by the senior, making sure everyone involved is quickly up to speed on any emergencies.

This community-focused approach not only strengthens the collective support for seniors but also ensures their safety without being intrusive. The system works quietly in the background, constantly monitoring for movement and falls, offering peace of mind to seniors and their caregivers alike.

Key features of the Gamgee Wi-Fi Fall Protection for Elderly

Safety include:

Fall Prevention Recommendations: Receive safety tips and fall prevention advice from the get-go and based on the monitored data, helping to reduce risks.

Immediate Alerts on Falls and Other Irregularities: Instantly get notified via text or push notifications when a fall or an irregular activity is detected, ensuring swift response and assistance.

Monitor Activity and Health: Monitor daily movements, detect anomalous behaviour, and track sleep patterns. Understand the elderly individual's routine and spot any irregularities.

In addition to its safety features, Gamgee has made sure the system is compatible with various Wi-Fi setups, with a particular focus on mesh technology to ensure robust signal coverage throughout the home. It also doubles as a 'regular' Wi-Fi network, providing seamless internet access.

This dual functionality not only supports continuous monitoring for falls and movements but also enhances the home's connectivity, making it a practical solution for both safety and everyday online activities.

The introduction of the Gamgee Wi-Fi Fall Protection for Elderly Safety represents a significant milestone for Gamgee, known for its commitment to enhancing user experience through technological innovation. This system is not just a new product but a new approach to elderly care, one that leverages existing technology in a novel and highly effective way.

To bring this product to market, we are launching a crowdfunding campaign on Indiegogo. We invite you to join us in revolutionizing elderly care by supporting our campaign.

This is the second campaign launched by Gamgee, using Wi-Fi to disrupt the smart home hub market. Our first campaign introduced the [Wi-Fi Home Alarm System](#), which leverages Wi-Fi signals to detect disturbances caused by movement. Unlike conventional security systems, this system analyzes disruptions in Wi-Fi signals to create a 'body print' of individuals, distinguishing between humans, pets, and inanimate objects.

This innovative approach has set a new standard in home security, providing intelligent differentiation, customizable detection zones, enhanced privacy, and continuous learning for improved accuracy and reduced false alarms.
