Increasing participation in various shooting sports acts as a key factor driving the shooting range market growth. Sports include target shooting, high-power rifles, popinjay, sporting clays, skeet shooting, cowboy action shooting, and others. In addition, people are increasingly participating in shooting sports in the region, owing to numerous benefits such as enhanced physical health, focus and sharpen eyesight. For instance, in October 2022, CARACAL, a prominent small arms manufacturer and a part of EDGE, major advanced technology and defense group, entered an initiative with International Golden Group (IGG) and Al Forsan Holding Group. The primary objective of this initiative is to support and foster the development of local shooting sports enthusiasts in the UAE. This partnership promotes the sport of shooting, creating opportunities for sports hobbyists and potentially enhancing the local shooting sports community.

Furthermore, the growing participation of school and college kids/students in national-level shooting sports is expected to promote the growth of the market. The rise in participation in shooting competitions across the regions is expected to fuel the growth of the Europe and Middle East shooting ranges market during the forecast period.

An indoor shooting range is inside the premises, and it can be built at a place where the zoning laws allow. Shooting ranges are required to maintain some safety norms and environmental concerns including noise pollution. It is comparatively easier for indoor shooting ranges to meet those requirements. Indoor firing ranges are popular among law enforcement and recreational shooters because they offer protection from inclement weather conditions and can be operated around the clock under controlled environmental conditions. Noise-controlled systems are being installed inside the indoor shooting range to prevent noise pollution. In addition, indoor shooting ranges can be built or located in high-traffic areas as it is inside the building due to which the shooters and members do not get disturbed by outside noise and can give full concentration to shooting. Thus, such factors further provide lucrative growth opportunities to the segment growth.

Longer-range shooting up to or over 1,200 yards is done at outdoor shooting ranges (1,100 m). In addition, some training may specifically require exposure to weather conditions including wind, rain, and dust. Although the weather may vary, outside competition shooting is preferred when conditions are favorable.

Outdoor shooting ranges allow increased firing mobility for more tactical freedom, distance, and terrain-based exercises. Outdoor shooting ranges can be used by recreational shooters, law enforcement officials, and military personnel. In addition, outdoor shooting ranges offer the shooter a natural environment to shoot in and provide opportunities for shooters to practice shooting skills in open areas. Thus, it drives the demand for the outdoor Europe and Middle East shooting ranges market during the forecast years.

Middle East includes regions such as Saudi Arabia, Turkey, Iran, UAE, and Rest of Middle East. Saudi Arabia and the UAE are driven by military investments and tourism, while Turkey and Iran see growth due to safety concerns and budget allocations. The Middle East's shooting ranges market exhibits varying trends across countries. Saudi Arabia's investments in military training and a growing interest in civilian firearm ownership drive demand for advanced ranges. In Turkey, concerns over unlicensed guns and armed violence have led to an increase in shooting range visitors. Iran allocates a substantial budget to military capabilities, ensuring a steady demand for shooting ranges.

The UAE's shooting ranges attract tourists and recreational shooters, and the country's focus on

military enhancement further supports the market. The rest of the region's growth varies based on security needs, cultural significance, and recreational shooting popularity. In addition, an increase in investment toward the advancement of military and law enforcement shooting training technology in the region is anticipated to support the growth of the shooting range market during the forecast period.

□□□□□□ □□□□ □□□□□□□□ :

The Russia-Ukraine War has had a significant impact on the Europe and Middle East shooting ranges market. The war in Ukraine has led to a surge in interest in firearms training and shooting lessons in Poland and other European countries. Many people, who had never used firearms before, have been enrolling in shooting courses to acquire self-defense skills in response to the conflict. This rise in demand for shooting lessons is attributed to concerns that the war's impact might extend beyond Ukraine's borders. Notably, both civilian shooting ranges and the Territorial Defence Forces, Poland's volunteer militia, have experienced a significant increase in interest and enrollment. This phenomenon reflects how geopolitical events can influence interest in self-defense training and firearm use in different regions.

Additionally, state-owned companies have initiated self-defense training programs for their employees. Several countries have seen a substantial increase in interest from potential recruits following the conflict in Ukraine, with an expansion plan to increase its personnel.
