[Growth Driver Of The Cartilage Degeneration Market](#)

The increasing prevalence of obesity is expected to propel the growth of the cartilage degeneration market going forward. Obesity is a medical condition characterized by an excessive accumulation of body fat to the extent that it may harm a person's health. Obesity can initiate and accelerate cartilage degeneration by increasing cartilage compressive forces and inflammatory cytokines. Obesity induces several pathological changes to the whole knee joint structure, including abnormal loading on the joint, joint malalignment, and muscle weakness.
