

Austin Plastic Surgeon's Guide to Cosmetic Injectables and Facial Fillers

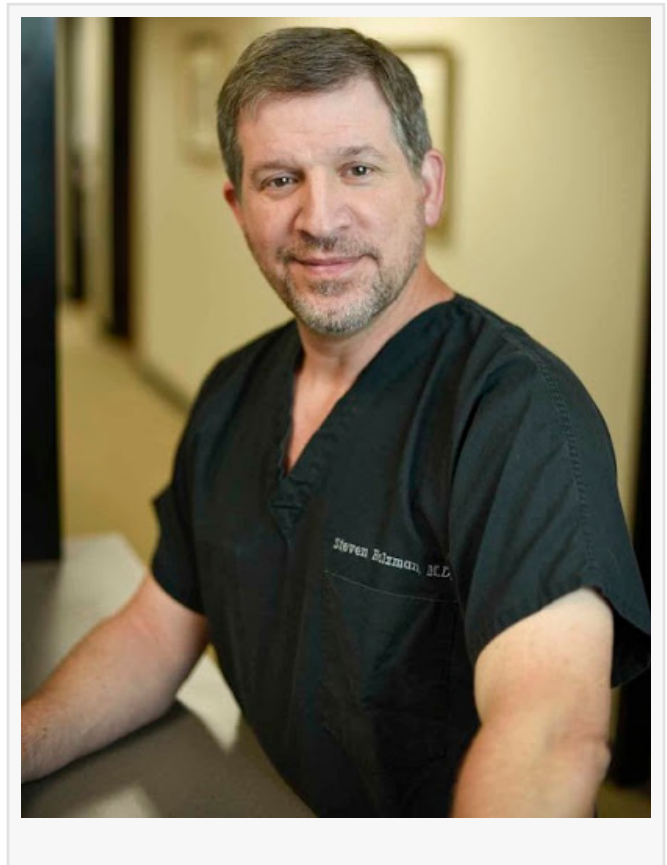

Dr. Steven Holzman, a board-certified plastic surgeon in Austin, provides an overview of the different types of non-surgical injectable treatments available.

AUSTIN, TX, USA, July 23, 2024 /EINPresswire.com/ -- Holzman Plastic Surgery is a premier cosmetic surgery center in the heart of Austin, Texas that takes pride in offering a comprehensive suite of non-surgical injectable treatments designed to meet the diverse aesthetic needs of its clients. Dr. Steven Holzman, a board-certified plastic surgeon with years of expertise, personally administers each injection, ensuring precision, safety, and exceptional results.

In the world of cosmetic enhancements, the choice of injectables plays a pivotal role in achieving desired outcomes. Recognizing this, Dr. Holzman provides a curated selection of safe, effective, and FDA-approved neurotoxins and fillers, each with its own unique properties and applications.

Neurotoxins: [BOTOX®](#) Cosmetic, [Dysport®](#), and [Jeuveau™](#) - Dr. Holzman offers BOTOX® Cosmetic, Dysport®, and Jeuveau™, three leading neurotoxin brands renowned for their effectiveness in reducing the appearance of fine lines and wrinkles. These injectables work by temporarily relaxing the muscles responsible for creating facial creases, offering a smoother and more youthful complexion. While all three share a common goal, they differ in formulation, onset of action, and duration of effect, allowing Dr. Holzman to tailor treatments to individual patient needs.

Fillers: [Restylane®](#) and [JUVEDERM®](#) - For those seeking to restore volume and enhance facial contours, Dr. Holzman offers JUVEDERM® and Restylane®. These hyaluronic acid-based fillers are injected to plump up areas that have lost volume due to aging or to accentuate features such as the lips and cheeks. Each brand has a range of products designed for specific areas and

concerns, enabling customized treatments that result in natural-looking and long-lasting improvements.

[Kybella®](#): A Non-Surgical Solution for Submental Fullness - Additionally, Dr. Holzman provides Kybella® injections, a revolutionary treatment targeting submental fullness, commonly known as a double chin. Kybella® is a synthetic form of deoxycholic acid that works by breaking down and absorbing dietary fat, resulting in a more defined jawline and neck profile.

Holzman Plastic Surgery is dedicated to offering the latest and most effective cosmetic solutions, ensuring that each patient achieves their aesthetic goals in a safe and welcoming environment. Dr. Holzman's hands-on approach to injections guarantees that patients receive the highest standard of care, with treatments precisely tailored to their individual needs and aspirations.
