

Cancer Supportive Care Drugs Global Market 2024 To Reach \$24.97 Billion By 2028 At Rate Of 4.6%

The Business Research Company has updated its global market reports with latest data for 2024 and projections up to 2033

LONDON, GREATER LONDON , UK, July 26, 2024 /EINPresswire.com/ -- The cancer supportive care drugs market has experienced robust growth in recent years, expanding from \$19.93 billion in 2023 to \$20.83 billion in 2024

at a compound annual growth rate (CAGR) of 4.5%. The growth in the historic period can be attributed to rising geriatric population, increasing prevalence of chemotherapy, growing demand for antiemetics, growing preference for online pharmacies and drug stores, increasing awareness of supportive care, increasing adoption of personalized medicine, growing emphasis on palliative care.

Growth Driver Of The Cancer Supportive Care Drugs Market

The improved survival rate for cancer patients is expected to propel the growth of the cancer supportive care drugs market going forward. Cancer survival rate refers to the percentage of people who survive a certain type of cancer for a specific amount of time, typically five years, after being diagnosed. Survival rates for cancer patients are primarily driven by early detection, advances in treatment, access to quality healthcare, the patient's overall health, the type and stage of cancer, and socioeconomic factors. Cancer supportive care drugs help improve cancer survival rates by managing side effects such as pain, nausea, and anemia, enabling patients to better tolerate their treatments and complete their full course of therapy, which can lead to improved outcomes.
