

# Global Gestational Trophoblastic Disease Market Overview And Statistic For 2024-2033

*The Business Research Company's Gestational Trophoblastic Disease Global Market Report 2024 – Market Size, Trends, And Market Forecast 2024-2033*

LONDON, GREATER LONDON, UK, July 29, 2024 /EINPresswire.com/ -- The gestational trophoblastic disease market has demonstrated strong growth, expanding from \$1.96 billion in 2023 to \$2.06 billion in 2024, with a

compound annual growth rate (CAGR) of 5.6%. It will grow to \$2.49 billion in 2028 at a compound annual growth rate (CAGR) of 4.8%. This growth in the historic period can be attributed to factors such as public health initiatives, improved understanding of disease pathology, medical research and clinical trials, development of targeted therapies, and shifts in treatment protocols.

## Increasing Cigarette Smoking Drives Market Growth

The increasing prevalence of cigarette smoking is expected to propel the growth of the gestational trophoblastic disease market. Cigarette smoking involves the inhalation of tobacco smoke, which contains harmful chemicals and toxins that can damage the DNA of trophoblastic cells. These cells, responsible for forming the placenta, can experience abnormal growth and division, leading to

gestational trophoblastic disease. For instance, in July 2022, Statistics Canada reported a 45.2% increase in cigarette production from August 2021 to August 2022. Additionally, the total number of cigarettes sold increased by 11.3% from May 2021 to June 2022, further driving the market.
