North Carolina Department of Public Safety Enhances Budgeting and Planning with OpenGov

The new system will enhance transparency, allowing for real-time data availability and improved customer service through a user-friendly online portal.

NORTH CAROLINA, UNITED STATES, July 31, 2024 /EINPresswire.com/ -- With the sunsetting of its homegrown system due to a departmental split, the North Carolina Department of Public Safety (NCDPS) sought a more robust solution for its budgeting needs. The Department chose OpenGov, the leader in budgeting and planning software for the public sector.

NCDPS, managing over $350 million in capital projects annually, faced challenges with manual capital pre-screening, a lack of financial reports, and limited visibility into projections. The team needed a system that could centralize the capital improvement process and provide detailed charts, graphs, and reports for leadership transparency. OpenGov Budgeting & Planning stood out for its ability to automate monthly reports and tie projects back to strategic initiatives, a state requirement.

With the implementation of OpenGov Budgeting & Planning, NCDPS can anticipate improvements in the budgeting processes. The department can expect to save approximately $40,000 per year by automating contract management and key date tracking. Additionally, the new system will enhance transparency, allowing for real-time data availability and improved customer service through a user-friendly online portal. This transition will streamline operations and ensure compliance with state requirements.

NCDPS joins more than 1,900 public sector organizations leveraging OpenGov to revolutionize work processes with cloud-based software designed specifically for the needs of government.

About OpenGov
OpenGov is the leader in modern cloud software for cities, counties, state agencies, and special districts. With a mission to power a more effective and accountable government, OpenGov serves more than 1,900 public sector leaders and their organizations. OpenGov is built
