Growth Driver Of The Non Invasive Fat Reduction Market

The rising obese population is expected to propel the growth of the non-invasive fat reduction market going forward. The obese population refers to individuals with a body mass index of 30 or higher, indicating a level of body fat that significantly increases the risk of health problems. The obese population is rising due to a combination of factors, including increased consumption of high-calorie, processed foods, sedentary lifestyles, genetic predispositions, and socioeconomic factors that limit access to healthy food and physical activity. Non-invasive fat reduction techniques, such as cryolipolysis and laser lipolysis, are used to help the obese population reduce localized fat deposits without surgery, offering a less risky alternative to invasive procedures.
