## [Strong Future Growth Anticipated](#)

The tylosin market is projected to continue its strong growth, reaching \$0.93 billion in 2028 at a compound annual growth rate (CAGR) of 5.8%. The growth in the forecast period can be attributed to rising global meat consumption, focus on animal health and welfare, expansion of livestock farming in emerging markets, regulatory changes and ban on antibiotic growth promoters, and growing demand for organic and antibiotic-free meat.

## Growth Driver Of The Tylosin Market

The increase in meat production is expected to propel the growth of the tylosin market going forward. Meat production refers to raising, slaughtering, and processing animals to obtain meat for human consumption. The increase in meat production is due to consumer preferences for nutritious, ethically sourced food products and concerns about animal welfare and

environmental sustainability. Tylosin is commonly used in livestock as an antibiotic to treat bacterial infections such as respiratory diseases and gastrointestinal issues, and it's also used as a growth promoter in some regions.
