Real estate investment trust market track record of reliable and growing dividends, combined with long-term capital appreciation through stock price increases, provide investors with attractive total return performance for most periods over the past 45 years compared to the broader stock market as well as bonds and other asset. Furthermore, most REITs operate along a straightforward and easily understandable business model by leasing space and collecting rent on its real estate, which is then paid out to shareholders in the form of dividends by the company. REITs must pay out at least 90% of their taxable income to shareholders, and most pay out 100%. In turn, shareholders pay the income taxes on those dividends.

Prime determinants of growth

The real estate investment trust market is driven by the integration of advanced technologies such as data analytics and proptech solutions. These innovations enhance operational efficiency, streamline decision-making processes, and provide valuable insights into market trends for REITs. On the contrary, AI has the potential to improve operational efficiency across various real estate sectors such as healthcare and hotels, leading to increased demand for data centers and towers that will provide lucrative growth opportunities to the real estate investment trust (REIT) market in the upcoming years.

The equity REITs segment to maintain its leadership status throughout the forecast period

By type, the equity REITs segment held the highest market share in 2022, accounting for more than two-thirds of the global real estate investment trust market revenue and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the fact that these REITs generate a steady income stream for investors through rents and leases, offering a reliable source of dividend income and long-term capital appreciation. However, the mortgage REITs segment is projected to manifest the highest CAGR of 8.5% from 2023 to 2032. This is attributed to the fact that these REITs provide investors with exposure to the real estate market without the responsibility of owning or managing properties directly. Mortgage REITs typically focus on generating income through interest payments on mortgages, which can be attractive to investors seeking stable returns and passive income.

The industrial segment to maintain its leadership status throughout the forecast period

By application, the industrial segment held the highest market share in 2022, accounting for more than two-thirds of the global real estate investment trust market revenue. This is attributed to the manufacturing and logistics companies that are increasingly realizing that they do not need to own their real estate, creating an opportunity for industrial REITs to acquire more properties crucial to the industrial sector, such as distribution centers. The rise in online sales has led to an increased demand for warehouse space, while supply chain challenges have prompted industrial companies to lease more space for inventory storage. However, the residential segment is projected to manifest the highest CAGR of 7.7% from 2023 to 2032. This is attributed to the increasing demand for REITs, which offer a diversified portfolio of real estate assets and provide consistent income and capital appreciation to investors. Furthermore, the REIT market has been expanding its product offerings to cater to specific sectors within the real estate industry, such as residential properties. This trend aligns with the growing preference for REITs as a means to invest in real estate without the responsibility of managing or owning the properties directly.

North America to maintain its dominance by 2032

By region, North America held the highest market share in terms of revenue in 2022, accounting for more than one-third of the real estate investment trust market revenue and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the fact that the market's composition has changed significantly since the Great Financial Crisis, with alternative property types such as data centers, cold storage facilities, cell towers, and healthcare properties comprising 64% of the U.S. REIT market by the end of 2022, according to Bloomberg. Furthermore, REITs have demonstrated robust operational performance and are well-equipped to navigate economic uncertainties, including recessions. However, Asia-Pacific is expected to

witness the fastest CAGR of 7.9% from 2023 to 2032. This is attributed to the increasing market capitalization of REITs in the Asia-Pacific region, coupled with the expansion of the REIT universe and the emergence of new markets embracing REIT concepts, which indicates a positive trajectory for the growth of the sector. As more Asian countries plan to introduce their versions of REITs, global investors will have increased opportunities for investment in the region, further fueling the growth of the Asia-Pacific REIT market.
