Growth Driver Of The Non-Small Cell Lung Cancer (NSCLC) Market

The increasing rate of tobacco consumption is expected to propel the growth of the non-small cell lung cancer (NSCLC) market going forward. Tobacco consumption refers to the use of tobacco products by individuals, typically in the form of smoking, chewing, or snuffing, which

introduces nicotine and other chemicals into the body. Tobacco smoke contains several carcinogens that can damage the DNA (deoxyribonucleic acid) in lung cells, leading to mutations and the uncontrolled growth of cancerous cells, including non-small-cell lung cancer (NSCLC).
