Growth Driver Of The Peptic Ulcer Market

The growing prevalence of obesity is expected to propel the growth of the peptic ulcer market going forward. Obesity is a medical condition characterized by an excessive accumulation of body fat, typically resulting in an individual having a body mass index (BMI) of 30 or higher. Obesity can result from genetic, environmental, and lifestyle factors, such as a poor diet and a

lack of physical activity. Obesity leads to the overproduction of stomach acid, weakens the stomach's protective mucosal lining, and contributes to developing peptic ulcers. Moreover, excess weight seems to promote inflammation in the gut, which can lead to the development of peptic ulcers.
