Growth Driver Of The Malignant Melanoma Treatment Market

The increasing exposure to ultraviolet (UV) radiation is expected to propel the growth of the

malignant melanoma treatment market going forward. Ultraviolet (UV) radiation is a type of electromagnetic radiation with a wavelength shorter than that of visible light but longer than X-rays. Malignant melanoma development is significantly influenced by exposure to ultraviolet (UV) radiation, especially UVA (315–400 nm) and UVB (280–315 nm). UV radiation can damage the DNA in skin cells, leading to mutations that cause the cells to grow and divide uncontrollably, forming a tumor.
