

# InventionHome® Product Developer Creates Multipurpose Childcare Mitt for Calming and Relaxing Infants and Toddlers

PITTSBURGH, PA, USA, August 6, 2024  
/EINPresswire.com/ --

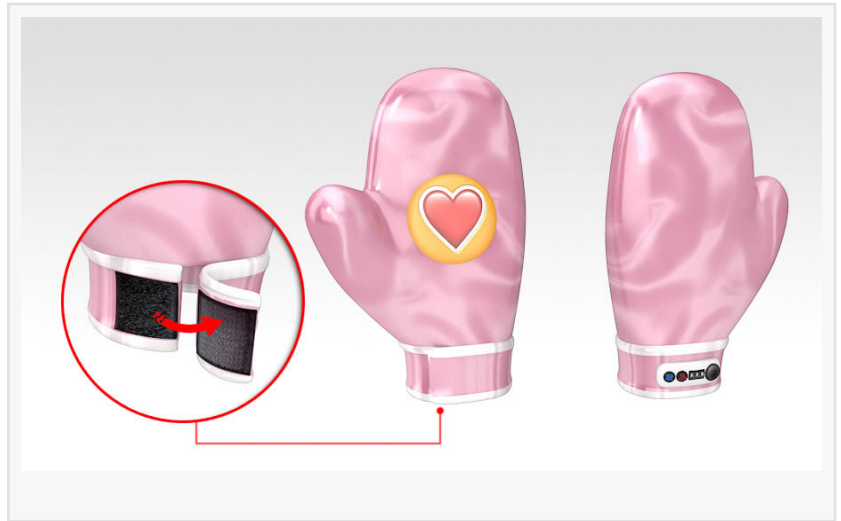

Donielle D. of Kingston, PA is the creator of The Soothing Mitt, an assistive device for parents of fussy infants. The mitt can be worn while holding a child and rubbed on their back to relax them. The device contains vibrating and heating elements, as well as a speaker for playing calming music. This unique tool will aid in soothing a baby to sleep quickly and easily, decreasing stress for parents and caregivers everywhere. The mitt is thick and padded inside, with a silky/polyester exterior to feel soft like the skin. The material stretches and slides easily over the hand.

The front of the mitt can be customized with different phrases or indicia and may be available in several different colors. The wrist has a hook and loop fastening system for easy adjustment so that it can be worn by anyone. An internal disc in the palm area can be set to vibrate at various speeds, and also contains a heating element for a warming effect. The disc is surrounded by a gel filled ring that will amplify its vibrations and conduct its generated heat throughout the palm. Both of these elements rest

underneath the soft exterior layer of the mitt.

The wrist area of the device houses the battery and control module that operate the device's heating and vibrating features. Another functional element located on the wrist is the speaker that emits music. It can play calming lullabies, several spa or nature sounds, and even the soothing sound of a mother's heartbeat. The calming music and soothing, heated vibrations will increase the child's comfort, enabling them to relax and fall asleep easier in your arms. Ultimately, the mitt functions as a simple and efficient tool for helping infants fall asleep faster.

The market for devices that soothe infants to sleep is a robust and dynamic segment within the baby care products industry. This market is driven by the universal need of parents to ensure their infants have restful sleep, which is crucial for healthy development and parental well-being. The global baby sleep aids market is expected to grow significantly, with a CAGR of around 6-7% over the next few years (i.e., 2022 to 2027). Several different products are currently available like white noise machines, lullaby machines and mobiles, and smart sleep devices.

While these products are useful and helpful to an extent, they commonly offer no interaction between parent and child. Fussy children may want to be held and soothed by parents rather than a simple toy or machine. The Soothing Mitt is innovative and versatile, offering the perfect solution to this common problem. The product would be a significant addition to any manufacturer's product line.

Donielle was issued her Utility Patent from the United States Patent and Trademark Office (USPTO) and is working closely with [InventionHome](https://www.inventionhome.com), a leading invention licensing firm, to sell or license the patent rights to her Soothing Mitt product. Ideal licensing candidates would be U.S. based product manufacturers or distributors looking to further develop and distribute this product innovation.

Companies interested in The Soothing Mitt can contact InventionHome at [member@inventionhome.com](mailto:member@inventionhome.com). Inventors currently looking for assistance in patenting, marketing, or licensing their invention can request information from InventionHome at [info@inventionhome.com](mailto:info@inventionhome.com) or by calling 1-866-844-6512.

InventionHome is a leading invention and product licensing firm focused on helping inventors and entrepreneurs through the invention and patent process with the goal of licensing or wholesaling client inventions.
