diverse category of diseases distinguished from acute leukemia by the cellular growth of one or more hematologic cell lines in the peripheral blood. The rise in myeloproliferative disorders is mostly driven by genetic disorders, overexposure to radiation, electrical wiring, or chemicals, the geriatric population. Myeloproliferative disease drugs block the BCR-ABL protein by binding to the ATP pocket in the active site, inhibiting downstream phosphorylation of the target protein, which helps in the treatment of the myeloproliferative disorder.
