Strong Future Growth Anticipated

The atenolol market is projected to continue its strong growth, reaching \$15.85 billion in 2028 at a compound annual growth rate (CAGR) of 7.2%. The growth in the forecast period can be attributed to increasing demand for atenolol, growing prevalence of hypertension, surging awareness regarding hypertension complexities, significant

rise in the aged population, poor lifestyle and dietary habits.

Growth Driver Of The Atenolol Market

The increasing prevalence of hypertension is expected to propel the growth of the atenolol market going forward. Hypertension, commonly known as high blood pressure, is a medical condition in which the force of the blood against the walls of the arteries is consistently too high. The rising prevalence of hypertension is influenced by various factors such as lifestyle, dietary habits, stress, and demographic changes. Atenolol helps manage hypertension by decreasing

heart rate, reducing the force of heart contractions, and inhibiting the renin-angiotensin-aldosterone system. These combined effects minimize blood pressure, which helps prevent hypertension-related complications and improves patient outcomes
