Growth Driver Of The Light Therapy Market

The increasing prevalence of skin diseases is expected to propel the growth of the light therapy market going forward. Skin diseases refer to a wide spectrum of ailments that affect the skin and can be brought on by bacterial, viral, fungal, allergy, and parasitic infections, as well as by the skin itself. Light therapy uses light waves to treat certain skin conditions such as psoriasis, eczema, mycosis, vitiligo, and others by exposing skin to an ultraviolet (UV) light for a set amount of time in combination with a medication that stimulates the skin's immunity and helps in skin

treating conditions in a natural way and reduces the cell development and inflammation that lead to skin disorders.
