Definition

The automated journalism market refers to the industry segment that focuses on the use of artificial intelligence (AI) and software to automatically generate news articles, reports, and other journalistic content. This technology, also known as "robot journalism" or "algorithmic journalism," involves the use of natural language processing (NLP) and data-driven algorithms to produce written content with minimal human intervention. The market serves media organizations, news agencies, and content platforms looking to increase efficiency, scale

content production, and provide personalized or data-heavy news stories. Automated journalism is often used for generating routine reports, such as financial summaries, sports recaps, and weather updates, freeing up human journalists to focus on more complex and investigative work.
