

# Dr. Brooke Jeffy Introduces Ellacor to Enhance Dermatology Services

SCOTTSDALE, ARIZONA, USA, August 15, 2024 /EINPresswire.com/ -- [Dr. Brooke Jeffy](#), MD, a renowned dermatologist in Phoenix, is excited to announce the addition of the [Ellacor® System](#) to her practice. This cutting-edge, non-surgical procedure is designed to address moderate to severe wrinkles and excess skin, offering patients a revolutionary option for facial rejuvenation without the need for surgery.

The Ellacor® system is the first and only FDA-cleared procedure that uses Micro-Coring® technology to remove micro-cores of skin. Unlike traditional methods that rely on thermal energy or incisions, Ellacor® achieves significant skin improvement by mechanically removing small portions of excess skin, allowing for natural healing and minimal recovery time. This approach ensures no visible scarring and delivers results that are both effective and natural-looking.

“We are proud to add Ellacor® to our range of services,” said Dr. Jeffy. “This innovative procedure delivers impressive results for wrinkle reduction and skin tightening, all without surgery. Patients can look forward to a quick, comfortable treatment with lasting benefits.”

Recovery times vary, but many patients return to their normal activities within a few days. Ellacor® is particularly beneficial for individuals experiencing early signs of aging, such as jowls, marionette lines, and perioral lines, who are not ready or willing to undergo surgical procedures. This breakthrough treatment represents a significant advancement in [aesthetic dermatology](#), offering long-lasting results and enhancing overall skin health.
