Pros:

- Dermal filler procedures are nonsurgical and involve only injections.
- Most fillers, specifically Neustem™, provide instant results with full effect visible within a few days after the procedure.
- The quick recovery and minimal downtime have become very attractive to those wanting cosmetic enhancements, but also want to immediately return to their normal activities.
- If the results are not satisfactory, they can often be reversed and even dissolved depending on what kind of filler is used
- Neustem™ can be tailored to individual needs, addressing specific areas such as lips, cheeks, or under eyes. Neustem™ can be used to address even nonfacial concerns such as hands, scars, hips and buttocks
- Restores lost volume in the face due to aging or even poor maintenance
- Neustem™ boosts skin hydration and can improve skin texture

Cons:

- While some may see this as a benefit, others might consider the temporary nature of fillers a drawback, with effects typically lasting 6 months - 2 years. This is why Dr. Simon recommends Neustem™ for longer-lasting effects.
 - The potential of overuse is always a factor – repeated treatment might lead to an unnatural appearance or “overfilled” look if it is not done properly and by a qualified provider
- It can be a costly treatment regimen since regular maintenance is required to sustain results
 - While generally safe, there can be side effects such as bruising, swelling, or redness at the injection site.

Dr. Ourian cannot stress enough to patients to make sure their provider is a qualified and

experienced physician. Inaccurate application of dermal fillers can possibly lead to complications and serious asymmetrical appearances, most noticeably in facial treatments

Versatile Applications:

Dermal fillers are a versatile cosmetic tool with a wide range of applications. Dr. Simon has introduced Neustem™ filler to the aesthetics world and has captivated everyone with his proven results. Administering Neustem™ in not just the face, he has been safely and sufficiently treating Acne Scars, Surgical Scars, Earlobe and Hand Rejuvenation, and even Buttocks and Hip enhancements. His technique has been widely recognized as an alternative to cosmetic surgeries, while still being able to address the concerns of his patients whether it is cosmetic, post-surgical, or if there is a correction concern.
