Growth Driver Of The Knee Bursitis Market

The increasing prevalence of bone-related diseases is expected to propel the growth of the knee bursitis market going forward. Bone-related diseases encompass conditions such as osteoporosis, arthritis, and bone cancer, affecting the structure, strength, and function of the skeletal system. The increasing prevalence of bone-related diseases is attributed to factors such

as aging populations, sedentary lifestyles, poor nutrition, and environmental changes. Bone-related diseases such as osteoarthritis and rheumatoid arthritis can lead to knee bursitis by causing inflammation and excessive pressure on the knee bursa. This inflammation results in pain, swelling, and reduced joint function.
