Liposomal Doxorubicin Market Definition

Liposomal doxorubicin refers to a formulation of the chemotherapy drug doxorubicin encapsulated within lipid bilayers, creating microscopic vesicles called liposomes. This encapsulation alters its pharmacokinetics, allowing for prolonged circulation in the bloodstream and accumulation at tumor sites due to enhanced permeability and retention effects. Liposomal doxorubicin is used to treat various cancers, including ovarian cancer, breast cancer, and Kaposi's sarcoma, with potentially reduced cardiotoxicity compared to conventional doxorubicin formulations.
