#### Definition:

Variable life insurance is a type of permanent insurance coverage that includes an investing component. Unlike standard life insurance policies, where the cash value rises at a fixed interest rate, variable life insurance allows customers to invest premiums in a variety of investment options, most commonly mutual funds. Furthermore, the performance of the policy's cash value is determined by the profitability of chosen assets. If assets perform well, cash value increases dramatically, resulting in a greater death benefit and more funds for withdrawals or loans. However, if assets underperform, cash value falls, lowering the policy's overall value.

#### Market Drivers:

- increased financial awareness, customization, and flexibility

#### Market Opportunities:

- adoption of technology and product innovation

Major Highlights of the Variable life Insurance Market report released by HTF MI:

According to HTF Market Intelligence, the Global Variable life Insurance market to witness a CAGR of 6.1% during forecast period of 2024-2030.
